Yusuke Kohatsu - Software Engineer

Portfolio | GitHub | LinkedIn

Professional Summary

After graduating from Meiji University with an engineering degree, I worked as a Systems Engineer at Hitachi Systems, responsible for backend (Java, MySQL) development and test design for customer management systems. After that, I moved to Canada and gained engineering experience (Next.js, TypeScript, Express.js, MySQL) in global environments through internships and volunteering while waiting for a full-time work permit. In my personal time, I've participated in Hacktoberfest, an OSS development event, to improve technical skills (Python, TypeScript, React.js).

I later joined Sippy Software as a Backend Engineer, handling SIP voice call system (Python, Go, MySQL) session management, connection status updates, and optimizing call history fetch from the DB (Python, PHP, PostgreSQL). I worked closely with the CEO and lead engineer, which required careful time and task management.

After returning to Japan, I've been working on Order Management System (Ruby, AWS, TypeScript) development at Ichigo, Inc. I've leveraged English skills for full-stack development of customer portals and subscription services (Next.js, TypeScript). Occasionally, I deal with incident response and daily support tickets for other teams and partner companies.

Skills & Experience

Backend Development for High-Traffic Systems: At Sippy Software, managed backend systems handling 540 billion seconds of communication traffic annually using Go and Python. I contributed to the migration from Python to Go while ensuring zero regressions. As part of a three engineer team, I developed XML-APIs in Python and worked with the large-scale data processing logic in a call management system built with Vue and PHP.

Experience related to business impact: At Ichigo Inc., I worked on a complex logistics system for snack box subscriptions to international customers, integrating various external services and handling diverse business scenarios and incident responses to prevent financial losses. I Communicated effectively in both English and Japanese with non-engineers such as the marketing team and buyers to work on feature requests.

Global Work Experience: I spent half of my career working abroad; currently, 80% of my colleagues at Ichigo, Inc. are non-Japanese, so English is the primary language. I managed asynchronous communication, clarified scope and deadlines, and minimized communication loss through meetings and clear task breakdowns.

Public Cloud Knowledge & Experience: I primarily used AWS, including CloudWatch, S3, Parameter Store, and ECS for development and debugging. I earned the AWS Certified Solutions Architect to further enhance my skills.

Work Experience

Ichigo, Inc | Software Engineer

Oct 2024 – Present | Tokyo, Japan

- Led the launch of a new shipping method within two weeks, implementing a new snack box delivery feature using AWS S3 and shipping service APIs.
- Fixed price data sync bugs from external services (Shopify, Amazon) to the OMS using Ruby, Sidekiq, and external APIs, considering rate limits and API throttling.
- Improved shipping label printing efficiency by implementing batch processing with Ruby and external APIs.
- Monitored Sentry alerts and addressed critical errors to the team.
- Developed a new listing page using TypeScript, Next.js, and AWS S3 within a week to address urgent customs rule changes.
- Refactored complex shipping logic, removing unnecessary code and updating related test code without introducing critical bugs.
- Handled daily support tickets from other teams in both English and Japanese in addition to my main responsibilities.

Sippy Software, Inc | Backend Engineer

Dec 2022 – Aug 2024 | Burnaby, Canada

- Improved call detail record report speed 3 times faster by optimizing table join patterns and analyzing DB query execution times.
- Delivered a custom shell script for phone number conversion to meet urgent customer needs, completing a $300 project within one week.
- Developed and deployed a new invoice table feature using Python and PostgreSQL.
- Debugged SIP session establishment and resolved protocol violations using Go and Python.
- Coordinated closely with the Ukraine QA team to ensure smooth migration from Python to Go without regressions.
- Led the design and implementation of maintainable, loosely coupled distributed components using Python, Go, PHP, and XML-RPC.
- Developed robust XML-APIs with 100% test coverage using Python and pytest.
- Improved team productivity by onboarding new engineers and through pair programming.

Myadcenter | Full-Stack Engineer Intern

Jan 2022 – June 2022 | Remote, Toronto, Canada

- Developed a phone number purchase form with comprehensive validation using Material-UI, JavaScript, Next.js, and Twilio API.
- Improved billing data retrieval efficiency and resolved performance issues using Node.js, JavaScript, Express.js, and MySQL.
- Refactored data search and filtering code for reusability using Node.js, JavaScript, Next.js, and MySQL.

Hitachi Systems, Ltd | Systems Engineer

Apr 2020 – Sept 2021 | Tokyo, Japan

- Developed robust REST APIs for user management systems in Java, achieving 100% test coverage with JUnit.
- Created reusable table components for user management systems using HTML, CSS, and TypeScript.
- Detected all potential bugs before release and achieved 100% test coverage for the Construction Cost Management System using Java, MySQL, and manual testing.
- Conducted thorough user testing and reported bugs to other teams via JIRA.
- Designed and verified test cases using MySQL and JIRA, eliminating all functional bugs in the construction cost management system.

OSS Contributions

fpdf2 PR

- Python library for creating PDFs from HTML.
- Added support for new HTML tags and removed deprecated main class, considering regressions.

novu PR

- Notification platform managing multiple channels like Slack, Email, and Push.
- Improved test coverage by adding component tests using Cypress and React.js.

Education

Cornerstone International Community College of Canada: Web and Mobile App Development, Jan 2022 – Dec 2023
Meiji University (Tokyo): B.Eng in Interdisciplinary Engineering, Apr 2016 – Mar 2020

Certifications

AWS Certified Solutions Architect – Associate Mar 2024 – Mar 2027
IELTS General Training O.A. 8.0 Aug 2023 – Aug 2025
Hacktoberfest 2022 OSS Contribution Oct 2022
